| Hayvan Epiteli |             |                              |                |                                                                                                                                                           |
| RE 11          | Fel d 1     | Kedi (Cat) (Fel d1)          | Major allergen | Uteroglobin; highly specific allergen component                                                                                                           |
| Besinler       |             |                              |                |                                                                                                                                                           |
| RF 180         | Cyp c 1     | Sazan Balığı (Carp) (Cyp c1) | Major allergen | Parvalbumin; cross-reactive to various fish species                                                                                                       |
| NF 24          | Tropomyosin | Karides (Shrimp)             | Major allergen | Tropomyosin; cross-reactive with Tropomyosin's of crustacean / mites / insects                                                                            |
| RF 311         | Dau c 1     | Havuç (Carrot)               | Major allergen | PR-10-Protein; Bet v 1 homologue, cross-reactive with various Bet v 1 homologues                                                                          |
| RF 491         | Mal d 1     | Elma (Apple)                 | Major allergen | PR-10-Protein; Bet v 1 homologue, cross-reactive with various Bet v 1 homologues                                                                          |
| RF 493         | Mal d 3     | Elma (Apple)                 | Minor allergen | nsLTP (non-specific Lipid-Transfer-Protein); cross-reactive to various Lipid-Transfer-Proteins (LTP) like Pru p 3                                         |
| RF 441         | Fra a 1     | Çilek (Strawberry)           | Major allergen | PR-10-Protein; Bet v 1 homologue, cross-reactive with various Bet v 1 homologues                                                                          |
| RF 443         | Fra a 3     | Çilek (Strawberry)           | Minor allergen | nsLTP (non-specific Lipid-Transfer-Protein); cross-reactive to various Lipid-Transfer-Proteins (LTP) like Pru p 3                                         |
| NF 131         | Ara h 1     | Yer Fıstığı (Peanut)         | Major allergen | Storage protein (7S Globulin); Risk marker for systemic reactions                                                                                         |
| NF 132         | Ara h 2     | Yer Fıstığı Peanut           | Major allergen | Storage protein (2S-Albumin); Risk marker for severe systemic reactions                                                                                   |
| NF 133         | Ara h 3     | Yer Fıstığı Peanut           | Major allergen | Storage protein (11S Globulin); Risk marker for systemic reactions                                                                                        |
| RF 138         | Ara h 8     | Yer Fıstığı (Peanut)         | Major allergen | PR-10-Protein, Bet v 1 Homologue                                                                                                                          |
| RF 139         | Ara h 9     | Yer Fıstığı (Peanut)         | Major allergen | nsLTP (non-specific Lipid-Transfer-Protein); cross-reactive to various Lipid-Transfer-Proteins (LTP) like Pru p 3                                         |
| RF 171         | Cor a 1     | Fındık (Hazelnut)            | Major allergen | PR-10-Protein; Bet v 1 homologue, cross-reactive with various Bet v1 homologues                                                                           |
| RF 178         | Cor a 8     | Fındık (Hazelnut)            | Pan allergen   | nsLTP (non-specific Lipid-Transfer-Protein); Risk marker for systemic reactions, potential marker for sensitizations to LTP                               |
| RF1714         | Cor a 14    | Fındık (Hazelnut)            | Minor allergen | 2s Albumin                                                                                                                                                |
| RF 531         | Pru p 1     | Şeftali (Peach)              | Major allergen | PR-10-Protein; Bet v 1 homologue, cross-reactive with various Bet v1 homologues                                                                           |
| RF 533         | Pru p 3     | Şeftali (Peach)              | Pan allergen   | nsLTP (non-specific Lipid-Transfer-Protein); Risk marker for systemic reactions, marker for sensitizations against LTP (Lipid Transfer Protein) in fruits |
| RF 534         | Pru p 4     | Şeftali (Peach)              | Minor allergen | Profilin; cross-reactive with grasses / herbs / trees / several fruits                                                                                    |
|                |             |                              |                |                                                                                                                                                           |

| Süt ve Yumurta      |                  |                                  |                 |                                                                                                                                                                                                                             |
|---------------------|------------------|----------------------------------|-----------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| F 67                | Gal d 2          | Ovalbumin (Hen ´s Egg)           | Major allergen  | Ovalbumin; cross-reactive with Ovalbumin ´s other bird egg ´s                                                                                                                                                               |
| F 68                | Gal d 1          | Ovomucoid (Hen ´s Egg)           | Major allergen  | Ovomucoid; indication for reactions to egg ´s in all ways of preparation (fresh and cooked)                                                                                                                                 |
| F 76                | Bos d 4          | Alpha-Lactalbumin (Cow ´s milk)  | Major allergen  | Alpha-Lactalbumin; instable to heat                                                                                                                                                                                         |
| F 77                | Bos d 5          | Beta-Lactoglobulin (Cow ´s milk) | Major allergen  | Beta-Lactoglobulin; instable to heat                                                                                                                                                                                        |
| F 78                | Bos d 8/9/10     | Casein (Cow ´s milk)             | Major allergen  | Casein; indication for reactions to cow ´s milk in all ways of preparation (fresh as well as cooked and in all products made out of it like e.g. cheese); cross-reactive with caseins of milk of sheeps / buffaloes / goats |
|                     |                  |                                  |                 |                                                                                                                                                                                                                             |
